---

## EDUCATION

---

### Case Western Reserve University

**Expected 2022**

Bachelor of Science in Engineering, Computer Science, **GPA: 3.84**

Cleveland, OH

- Relevant Coursework: Data Structures, Algorithms, Operating Systems, Artificial Intelligence, Discrete Math, Databases, Logic Design and Computer Organization, Software Engineering, Linear Algebra, Statistics for Signals

## EXPERIENCE

---

### Erie Insurance Group

**June - August 2020**

Software Engineer Intern, Enterprise Content Management

Erie, PA

- Designed a data cleaner that deletes special characters in ~1.4 million claims documents per year, with ~95% accuracy (*via performance tests*), leveraging IBM content collector to process untranslated .txt/.pdf metadata files.
- Improved code coverage of metadata processor files by ~7%, using JUnit framework to write new test suites.
- Wrote documentation on JUnit/Unit testing to be shared with future SWE interns to help with onboarding.

### Case Western Reserve University

**January 2020 - Present**

Teaching Assistant: EECS 233 (Data Structures), EECS 340 (Algorithms)

Cleveland, OH

- Conducted weekly office hours for students in a ~150 person class to help them better understand fundamental concepts in data structures and algorithms.
- Collaborated with the professor to generate problem sets and grade homework, quizzes, and exams.

### ThinkTown Education

**June - August 2019**

Software Engineer Intern, WeChat App Development

Zhejiang, China

- Built a homework section for a WeChat mini-program accessed by ~3500 students (*WeChat API, WXML, WXSS*).
- Enhanced the organization and efficiency of the program by ~30% by "locking" problem sets whose prerequisites were not yet met, preventing students from skipping around and potentially sharing solutions.

## PROJECTS

---

### Screen Distancing Detector

**June - August 2020**

- A monitoring device that warns users if they are too close to their screens, with ~25 warnings/day, using OpenCV.
- Applied *CascadeClassifier* and *pyscreenshot* to allow compatibility with new users, who initially enter their eyesight and are provided with the recommended distance from their screen.

### 5 Bots in 5 Days

**May 2020**

- Automated 5 bots in 5 days, employing *Selenium* and *Chromedriver*, to spread positivity during COVID-19.
- Used *pytesseract* to "bypass" bot-prevention logins by parsing the authentication codes sent to iMessage.
- Notable projects include a Tinder bot that sends wholesome messages to all matches, a LinkedIn bot that sends recruiters friendly, personalized notes, and an Instagram bot that likes/comments on posts.

### Jeweled

**April - May 2019**

- Created a game similar to Candy Crush via *JavaFX*, where players can enter a desired board size and theme.
- Each cleared gem is marked and randomly replaced, and the number of moves to mark every gem is recorded.

## LEADERSHIP

---

- **Google DSC Lead:** Host seminars and work with students to support local businesses using Google technologies.
- **Resident Assistant:** Live in a co-ed dorm with ~175 Freshmen, serving as a mentor and advisor.
- **Club Tennis** (VP of Logistics): Lead practices, built and maintain [cwruclubtennis.com](https://cwruclubtennis.com), and send out newsletters.

## SKILLS

---

- **Programming/Web Development:** Java, Python, C, C++, HTML, CSS
- **Misc:** Git, JUnit/Unit testing, iOS, Unity, Bootstrap, OpenCV, Selenium, Webdriver, LaTeX
